

A9. Date Setting

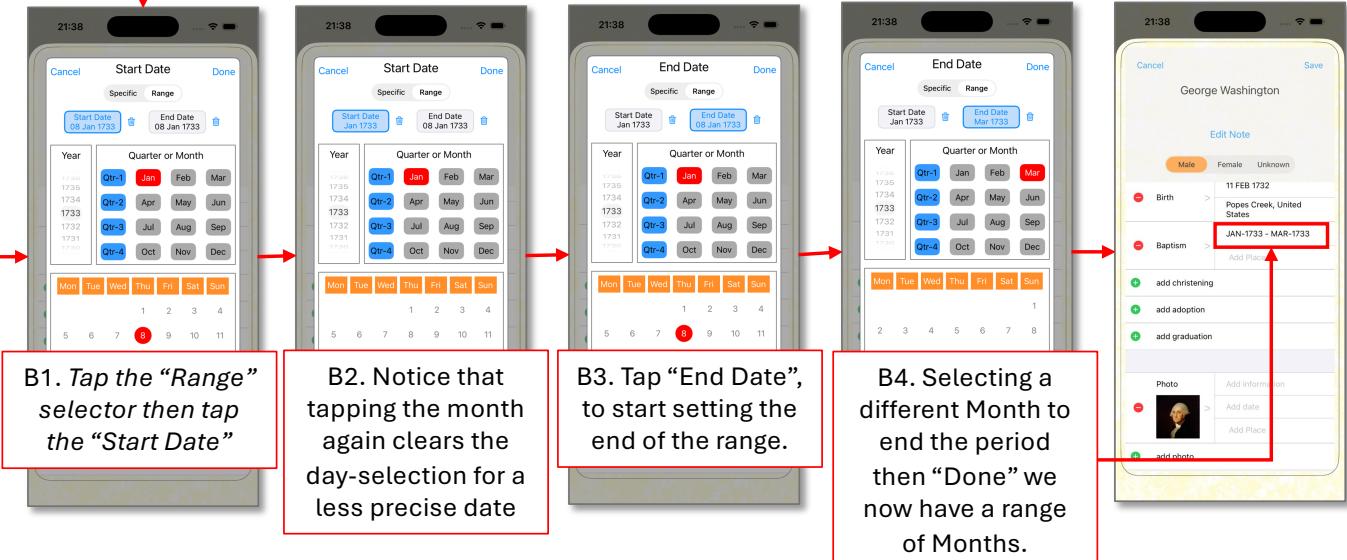

A. Specific Date

Forebears allows you to record dates at all levels of precision from Year through to an exact date.

B. Date Range

Forebears also allows you to record a range of dates within which the event occurred. Or indeed a period over which an attribute (eg. Occupation / Residence) applied.

A4. For full precision (within a month), you may tap a specific day.

Tapping "Done" will set the specific date at whatever precision you have defined.

However, you may choose to convert the specific date to a date-range.

B1. Tap the "Range" selector then tap the "Start Date"

B2. Notice that tapping the month again clears the day-selection for a less precise date

B3. Tap "End Date", to start setting the end of the range.

B4. Selecting a different Month to end the period then "Done" we now have a range of Months.
